WOOD'S CROP SPECIAL

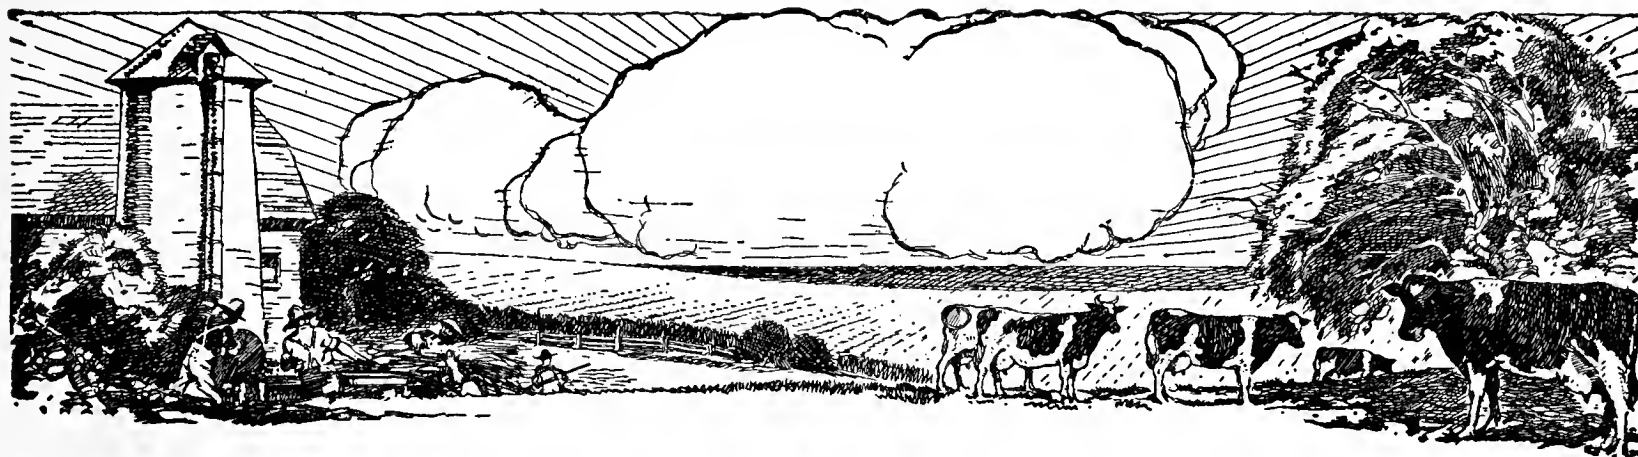

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XXVII.

MAY EDITION

1932

May and June the Active Seeding Months For Seed Corn, Summer Legumes and Hay Crops

With the low seeding and labor costs now prevailing, ample feed and pasture crops should be put in to cover your late summer, fall and winter needs.

COW PEAS AND SOJA BEANS SEEDING COST \$1.00 TO \$1.50 PER ACRE

These valuable summer legume crops can now be put in at the lowest prices on record, and should be used extensively in building up the soil, which will result in a material saving in the cost of fertilizer. Both will produce large yielding hay crops of high feeding value and greatly relished by all live stock.

SUDAN GRASS

SEEDING COST 60c. to 75c. PER ACRE

The best of all dry weather grasses, furnishing fine pasturage during summer months, or a hay crop in 40 to 50 days. As a catch crop, or where there is a shortage of feed, few crops will equal Sudan Grass. Sow 20 to 25 pounds per acre.

SORGHUM The most productive of all forage crops. Early Amber and Orange recommended for fodder. The Sugar Drip and Texas Seeded Ribbon Cane for syrup.

Your Garden Keep it working. Make plantings every month and lay in good supplies for winter needs. Don't overlook edible peas. Plant them liberally to have plenty of dried peas for table use. Late Potatoes should also be included in every garden.

EDITORIAL

"Tax Exempt Co-Operatives."

In our last issue we showed how certain co-operatives, originally formed to help farmers get higher prices for their products, had linked up with large Western mills, flooding the East with cheap feeds in competition with home grown products and completely demoralizing markets they had intended to boost.

Here is another's view: "Every tax payer was glad to relieve co-operatives of paying taxes, and for the Government to make them unlimited loans at low rates of interest, if they could increase farmers' incomes; but when relieved of this heavy expense, some took advantage of their favored position to sell every commodity from hats to coffee for their own profit and the farmers' loss, making absolutely no contribution in the way of taxes, and to put out of business the very tax paying merchants who were supporting them. Already whole tax paying industries have been wiped out, reducing the government income and increasing the burden of other tax payers who are staggering under these increases, each of whom must pay his proportion of the taxes these co-operatives do not pay.

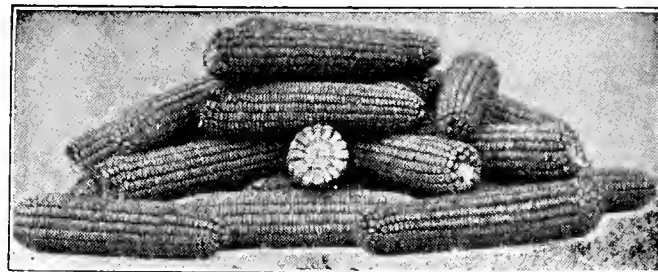

"Rise up Tax Payers! Demand that these Co-Operatives who have turned traitor to the farmers be forced to pay taxes like you and I."

(We will be glad if you will write us your views.)

Wood's Virginia Grown Pedigreed Seed Corns

BRED BY LEADING CORN BREEDERS, FIELD INSPECTED, EARS HAND SELECTED, TIPPED AND BUTTED. GERMINATION 90 to 100%.

In 1931 Wood's Seed Corns were tested by State Experiment Stations in half the States in the Union—from Massachusetts to Louisiana, Wisconsin to Florida—frequently making the highest yields.

Wood's Hybrid Early Yellow Corn

CLARAGE EARLY YELLOW DENT. Matures 96 days.

Va. State Experiment Stations report it the earliest and heaviest yielding extra early corn: "Well adapted here at 3,000 feet elevation; heavy yield; strong stalk, many with 2 and 3 ears." Va. Coastal Station: "Ideal for early feed and hogging down, little weevil damage, grain close, small cob." World's record yield 176 bus. per acre on 10 acres in Ohio. At top West Virginia high altitude test.

WOOD'S IMPROVED GOLDEN DENT. Matures 120 days.

Large, beautiful golden grain, rich in vitamins. Second highest Bowling Green Va. test. Va. Coastal Sta.: "Best yellow corn for South, shells out 90%—5% higher than any other." Sixty-eight bushels per acre in 5-acre corn test Spartanburg, S. C. Georgia Expt. Sta.: "Good early corn. Little weevil damage. Second highest yield." Largest ears Florida and Miss. test. Most popular yellow corn in South, early feed, hogging down. Full crop following potatoes.

REID'S YELLOW DENT. Matures 119 days.

Our new Certified Prize Winning Strain has won sweepstakes in Md. Corn Show this year, Va. Corn Show four years in a row, Chicago International Corn Show; and gold medal for yielding over 100 bus. per acre. Large beautiful ears 10½ inches long; 18 to 22 straight rows of deep grain, tight on the cob, filled out at butt and tip; rough dent, 2nd highest yield of 23 varieties (95 bus. per acre) at Va. Holland Expt. Sta.; 92 bus. acre at Williamsburg Expt. Sta.

WOOD'S HYBRID EY. YELLOW DENT. Matures 105 days.

In most northern State Experiment Stations Hybrid corn is making new record yields, often 1/3 more than standard varieties. W. Va. University reports: "Made 90.2 bus. per acre, highest yield in tests throughout the State; most disease free. Does not lodge." Blacksburg, Va.: "Made 96% marketable corn, the highest of 43 varieties; yielded over 75 bus. per acre." Every stalk has a uniform large ear; grain close on small cob; short, sturdy stalk; good root system. Cold resistant; ideal for mountains and north.

WOOD'S PEDIGREE BOONE COUNTY. Matures 126 days.

Best white show corn. Large 10½-inch ears, 20 to 22 straight close rows, tight on the cob, well filled butt and tip. Rough dent; heavy yielding corn for good land. In 5 Va. State tests did not fall below 3rd place for white cob white dent varieties, yielding highest in one (85 bus. acre).

WOOD'S DIXIE. Matures 129 days.

Heaviest yielding prolific corn for average soil. Two large, sound 10-inch ears to stalk. Deep, broad, hard grain; small cob, long shuck; weevil resistant. 98 bus. per acre in Williamsburg test. Highest average two N. C. Coastal Expt. Stations, shelling 86%. 2nd highest S. C. Coastal Sta.: "Early, allows late planting, escaping bud or cutworms." Sixty-two bushels per acre, shelled 88.3% S. C. Pee Dee Sta.

WOOD'S GOLDEN PROLIFIC. Matures 121 days.

Most prolific and highest yielding yellow corn in most Southern State tests, particularly N. C. and Ga. Average 86 bus. acre 3 Va. Expt. Sta. Two large ears to stalk, large deep flinty grains, medium dent, rows close, cob small, high shelling per cent, long shuck, weevil resistant.

BIGGS' SEVEN EAR. Matures 125 days.

Earliest prolific corn. Best for medium to poor land; 2 or 3 sound ears, hard grain, close small cob, high shelling per cent, long shuck, weevil resistant; small stocky stalk. Yielded 167 bus. per acre in N. C. 3rd highest of 20 varieties tested at both N. C. Coastal Expt. Stations; only 1% barren stalks.

WOOD'S IMPROVED WHITE DENT. Matures 127 days.

Many Experiment Stations note its beautiful large sound ear, broad deep hard grain set close, and freedom from rot and insect damage. Ears 11 inches long, medium dent. Highest yielding white variety 8-year Va. Piedmont test and two other Va. State tests. 89 bus. per acre at Blacksburg. Wide adaptation of climates and soils. Popular for roasting ears with Southern truckers.

WOOD'S SOUTHERN SNOWFLAKE. Matures 128 days.

Heaviest yielding early roasting ear corn, outyields most field corns if left to mature. 96 bus. per acre at Williamsburg Expt. Station. Two large market size ears to stalk; tender, excellent flavor. Deep rich snow white grain; small cob. Roasting ears 90 days. One-third more roasting ears than 12 other varieties tested Florida Expt. Station. Most popular early Southern roasting ear corn.

HASTING'S PROLIFIC. Matures 132 days.

Most prolific and heaviest yielding late corn on rich soil. 2 to 8 small sound ears, heavy stalk. Long tight shuck, weevil resistant. Highest yield (106 bus. per acre) Williamsburg Va. State test. Most prolific (88%, having 2 or more ears) and 2nd highest white corn N. C. Coastal Station. 2nd highest Ga. Coastal Station. Highest yield Florida 1929. 2nd highest 7 Louisiana Stations. Highest yield and shelling per cent (87½%) 2 Miss Experiment Stations.

WOOD'S PAMUNKEY ENSILAGE. Matures 128 days.

Bowling Green Va. Expt. Station says: "It is the tallest and best ensilage corn. Large, sturdy stalks, 16 to 18 feet tall, strong roots; no fallen stalks, where other corns are badly lodged; no barren stalks, many with 2 large ears." Heaviest yield ensilage Staunton Va. Expt. Station. Considerably heavier yield than other varieties Delaware Expt. Station. 16 tons per acre, highest in 4 Connecticut State tests. Mass. Expt. Station says: "Yielded 16 tons and 40 bus. grain per acre. Made the most dry matter, best ensilage variety." Highest Minnesota Expt. Station. Md. University uses our ensilage seed exclusively, and recommends it.

Wood's Pamunkey Ensilage

SUGAR DRIP SORGHUM

AS NECESSARY AS A HOME GARDEN

No crop will make as much delicious food to the acre. Made a record yield of 443 gallons of syrup per acre, averaging 218 gallons in six North Carolina Sorghum variety tests—almost double the yield of common varieties—and is harvested over a longer period of time without the syrup becoming dark and of a harsh flavor as other sorghums do when over ripe. The stalk is stronger and does not blow down in wind storms like other varieties. Sixty-five per cent to eighty per cent of the cane's weight is juice; when pressed out and boiled down makes a syrup of excellent flavor and bright color. It grows ten to twelve feet tall with abundant fodder, and is more economical for ensilage than corn, yielding eighteen tons per acre. Sugar Drip makes almost double the fodder of common sorghum when planted for pasture, green or cured feed. Plant in rows and cultivate like corn, five to eight pounds per acre, preferably on rich, heavy, well-drained land, and cut for syrup or ensilage just before the heads ripen.

JAPANESE BUCKWHEAT

Buckwheat brings a higher price than wheat, yields as well, is easier and cheaper to grow, yielding well on soil too poor for other crops, especially light sandy soil, or on newly cleared ground.

It is a good soil improver and summer cover crop for orchards, grows erect with broad spreading leaves, killing

weeds on land to be put in grass in the fall. Bees fed on buckwheat make more honey.

It is a good catch crop where corn, clover or other crops fail; can be planted to the middle of July, maturing a full grain crop in eight to ten weeks. Plant one bushel per acre in a grain drill, not too deep (one to two inches), in a firm, well-prepared seed bed. Harvest in small, loose bundles; dry thoroughly in shocks and thresh. The grain commands a premium for poultry food or millers of buckwheat flour which makes delicious cakes.

Japanese is the heaviest yielding and largest grained buckwheat variety.

WOOD'S INGOLD COTTON

WOOD'S CERTIFIED TRICE COTTON

BRED FOR LONG STAPLE, EARLINESS AND YIELD

1 1/16-inch staple bringing a large premium, making a losing crop profitable. They are grown at the top of the cotton belt and are two weeks earlier than ordinary varieties, getting ahead of the boll weevil. Good for late planting. Experiment Stations, County Agents, and growers throughout the South make favorable reports of their high yield, per cent of lint, and long staple. They always stand at the top of the Virginia Experiment Station test, Wood's Ingold yielding the most lint cotton and Certified Trice the most seed cotton per acre. For complete descriptions of these and other varieties refer to page 80 of Wood's 1932 Catalog.

Wood's Virginia-Grown Ensilage Corns

Improved by the latest methods of corn breeding on our thousand-acre farm.

Outyield Other Varieties at Twelve Northern State Experiment Stations

IN 1931 WOOD'S ENSILAGE CORNS WERE TESTED AT THE MARYLAND, PENNSYLVANIA, OHIO, NEW YORK, CONNECTICUT, MASSACHUSETTS, NEW JERSEY, DELAWARE, MICHIGAN, MINNESOTA AND ILLINOIS STATE EXPERIMENT STATIONS.

Ten Wood's varieties averaged 16.1 tons of ensilage per acre to 10.9 tons average of 8 other leading silage corns in a summary of 2-year tests in Penn., Conn. and Minn.; four Ohio tests, and the Mass. test shown below.

Dr. Metzger, Maryland Experiment Station: "Wood's large ensilage corn tested here fourteen years, produced the highest yields, and is used exclusively by our college dairy farm, averaging 15.3 tons per acre for four years—over double the State average."

Dr. D. F. Jones, Connecticut Experiment Station: The 1931 test shows quite an outstanding advantage for Wood's late large Southern corns. We strongly recommend them, as they regularly produce the most dry matter, feed nutrients and milk per acre, with a large saving of labor."

Ears Carefully Hand Picked, Nubbed and Butted.

Germination 90% to 100%. Sacks Free.

EUREKA—Our improved strain is far superior to the common variety, which is badly mixed with field corn. Highest average yield 20 tons per acre four Ohio State tests; 19 tons per acre Minnesota two-year test; and highest yield three-year New Jersey test.

WOOD'S VIRGINIA ENSILAGE—The Delaware Expt. Sta. reports: "Wood's Virginia Ensilage made highest average yield in our tests for years." Second highest yield, 18.3 tons per acre in four Ohio tests.

COCKE'S PROLIFIC—Highest yield Illinois, Indiana and 13-year Maryland test. Early, compact thickly leaved stalk, several small ears on each. Heavy yield of grain. Easiest to handle and put through cutter.

BLUE RIDGE—About 10 days earlier than Eureka, maturing heavy yield of ears in North. Largest broad grain ensilage corn. Highest yield, 19.1 tons per acre two-year Minnesota test. 18.1 tons average four Ohio tests.

YELLOW SWEEPSTAKES OR GOLDEN BEAUTY—Beautiful broad, golden grain; heavy yield of large ears. Ten days earlier than Eureka. Tallest best vegetative growth Wisconsin test. Very popular in New York and New England. Averaged 18 tons per acre in four Ohio tests.

VIRGINIA HORSETOOTH—Very broad, deep, beautiful grain, and heavy fodder. Stood second in Illinois State test.

TWO-YEAR SUMMARY OHIO, PENN., CONN., MASS. AND MINN. TESTS

Wood's Ensilage Varieties:	Days to mature ensilage	Average tons per acre
